Advances in Neuromuscular Rehabilitation

John Basmajian: Pioneer in Surface Electromyography
Unmatched versatility for the clinician.

Unmatched power for the researcher.

Unparalleled support for the NeXus-10.

True Dual Monitor Support
The BioTrace Software has been designed for optimal support of the NeXus-10 system. It offers true dual-monitor support so you only need one computer to run separate application windows. Navigating up to 12 screens is a breeze — as simple as pressing one function key. BioTrace is highly configurable allowing you to edit and change settings on the fly, without having to stop or restart a session.

About Stens Corporation
For more information, contact Stens Corporation. We have the largest distribution network of any independent biofeedback instrument, and we sell our product online. To learn more, visit our website. As a service to the biofeedback community, Stens has been providing high-quality biofeedback products with superior service and support for over 30 years.

More Mobility
By leveraging the power of wireless technology, the NeXus-10 comes with wirelesspendent capabilities, allowing you to move around the facility, putting the power of biofeedback where it’s needed.

More Versatility
The NeXus-10 is a powerful, feature-rich system that offers features not found in any other biofeedback/EEG or research systems.

More Precision
Not only does the NeXus-10 deliver more accurate results than many other systems available, it also offers advanced precision and accuracy for more precise readings.

More Cost-effective
The NeXus-10’s affordability is comparable to other devices in its class. It delivers unparalleled power and performance while meeting your biofeedback needs in the long term.

More Durable
Not all NeXus-10s have been designed with the future in mind. The NeXus-10 build allows for real-time monitoring capabilities that reflect its performance characteristics. It guarantees productivity across the most demanding environments.

More User-friendly
BioTrace software is the most user-friendly software on the market, allowing convenient access to any biofeedback module. The software is designed to be as user-friendly as possible.

More Multi-media
BioTrace is designed with a sophisticated multi-media interface, offering a high-quality audio and video output. The software allows for real-time audio and video output.

More Flexibility
BioTrace software allows the flexibility to easily manage sessions in seconds, making sessions easier.

More Scalability
Like all NeXus-10s, BioTrace software has been designed to be on the cutting edge, ready to meet your needs.

BioTrace is designed to perform with accuracy and precision.
