Surface Electromyography in Research and New Horizons for the Blood Volume Pulse Sensor
More Mobility
By leveraging the power of wireless
Educational technology, the NExus-10
comes to you wherever you need,
drastically improving the possibility of
more mobility.

More Versatility
The NExus-10 is a powerful, feature-
rich device that offers a wide range of
applications and versatile functionality.

More Precision
Not only does the NExus-10 deliver
more accurate results than many other
systems available, it also works well with
unstable and unpredictable conditions.

More Cost-Effective
The NExus-10’s affordability and
flexibility make it more cost-effective
than other systems, allowing for
innovative and cost-effective
applications.

More Durable
The NExus-10 has been designed to
stand up to the rigors of frequent
use and demanding environments.

Unmatched versatility for the clinician.
Unmatched power for the researcher.
Unparalleled support for the NExus-10.

True Dual Monitor Support
The BioTrace Software has been designed for optimal support of
the NExus-10 system. It offers true dual monitor support so you
need only one computer to run separate applications and clinical
classes. Navigating up to 12 screens is a cinch — as easy as pressing
the same function key. BioTrace is highly configurable allowing you to
edit and change settings on the fly, without having to stop or restart
a session.

About Stens Corporation
For more than 30 years, Stens Corporation
has been the leading distributor of
consumer’s biofeedback and educational,
and in the exclusive distribution of Nexus.
24 of the BioTrace Biomedica Systems in North
America. Stens has been a key partner
specializing in expertise in the
biomedical, educational, psychology, and
environmental sectors of biofeedback and
non-invasive, non-pharmacological
research.

NEXUS-10

Biofeedback Foundation of Europe

The Biofeedback Foundation of Europe (BFE) is a non-profit organization located in the
Netherlands. The BFE supports the deployment of teaching and the training of licensed
and certified professionals to establish multidisciplinary teams of clinicians and research-
ners to collect data in pilot International Research & Education Projects (IREPs) around
the world.

If you have specific skills and experience you can bring to a team and want to join a lim-
ited number of locations around the world that can receive a subsidy towards the training
and technology being used by IREP teams, please review the IREP team guide and com-
plete the Pilot Research Project Questionnaire on the BFE website under research.
The following is a list of topics for which Pilot Project Teams are being formed:

Neurofeedback (EEG) Biofeedback (BFR) Surface Electromyography (SMEG)
